

RxLogic Tailors Technology Solutions for Payers & Integrated Delivery Networks (IDNs): Transparent, Modular Pharmacy Benefit Control for Modern Healthcare Organizations

RxLogic delivers modern SaaS-based technology solutions that simplify and strengthen pharmacy benefit operations. For payers and Integrated Delivery Networks (IDNs), RxLogic provides a cloud-native, modular pharmacy benefit platform that replaces black-box PBM systems with transparency, control and operational efficiency.

As payers and IDNs increasingly manage their own pharmacy benefits, specialty pharmacies and delegated risk arrangements, they are under growing pressure to reduce drug spend, improve patient outcomes and meet expanding regulatory requirements. RxLogic enables organizations to bring pharmacy benefit management in-house without sacrificing performance, compliance or financial oversight.

Where Traditional PBM Models Fall Short

Legacy PBM models were not designed for the IDN environment, and their platforms often trigger friction and risk. They limit visibility into pricing and rebates, slow benefit changes and separate pharmacy operations from clinical and financial decision-making.

Legacy Black-box pricing and rebate structures limit transparency and auditability.

- Slow configuration cycles delay benefit and formulary changes.
- Fragmented systems separate claims, finance and compliance workflows.
- Limited visibility into specialty and system-owned pharmacy performance.
- Manual reconciliation increases administrative burden and error risk.
- Poor integration with EMRs and clinical data restricts coordinated care.

These gaps make it difficult for payers and IDNs to control costs, manage delegated risk and align pharmacy benefits with broader care delivery goals. RxLogic addresses these challenges by giving organizations direct control over adjudication logic, pricing, rebates and financial workflows. The result is a pharmacy benefit infrastructure that supports coordinated care, faster decisions and measurable financial ROI.

What Sets RxLogic Apart

Transparent, Configurable Adjudication Core: Private-label, cloud-native adjudication with full visibility into benefit rules, maximum allowable cost (MAC) pricing, formularies, accumulators, step therapy and drug utilization review (DUR). No black-box logic.

Modular, Scalable Architecture: Start with adjudication and expand with financial, rebate, compliance and transparency modules as needs evolve. Adopt only what you need, when you need it.

Financial Automation with Payables/Receivables: Automates pharmacy payments and client billing with audit-ready outputs, reducing reconciliation time and improving CFO-level visibility.

Rebate Administration & Optimization: Capture, track and forecast rebates at the NDC level with transparent reporting to support financial planning and contract performance.

Pharmacy & Pricing Control: Supports outpatient, specialty and system-owned pharmacies with real-time adjudication and integrated price checks for patient financial transparency.

Compliance-Ready Workflows: Claims accuracy monitoring, audit-ready reporting and data feeds to support CMS, state and delegated entity requirements.

API-First, Cloud-Native Infrastructure: Seamlessly integrates with EMRs, pharmacy systems, finance platforms and third-party partners. Secure, scalable and SOC II / HIPAA compliant.

Value Across Payers and IDNs

For Payers

- Greater control over PBM contracts, pricing and rebate performance.
- Faster benefit configuration without long vendor cycles.
- Audit-ready reporting for finance and compliance teams.
- Improved ROI through error reduction and rebate optimization.

For IDNs and Health Systems

- Private-label adjudication for system-owned or delegated health plans.
- Improved performance and revenue protection for specialty and retail pharmacies.
- Support for employer and delegated risk programs.
- Integrated price transparency to improve patient experience and adherence

Extending Control to Discount Networks and Off-Formulary Spend

Third-party drug discount cards in provider lobbies and affiliated pharmacies often operate outside the IDN's control, diverting volume and margin, creating patient confusion, and offering limited transparency into pricing or utilization.

RxLogic enables IDNs to replace unmanaged programs with a system-aligned, private-label discount network, fully integrated into adjudication, reporting and finance.

Through this approach, IDNs can:

- **Retain** prescription volume within system pharmacies
- **Align** discounts with enterprise pricing strategy
- **Configure** by drug class, channel or care setting
- **Integrate** copay cards and off-formulary routing to manage costs
- **Maintain** a consistent, patient-friendly experience

This ensures patient affordability while preserving pharmacy margin and operational control.

A Practical Expansion Path

RxLogic supports a phased approach to modernization:

Entry Point: Deploy the adjudication core and PayRec for immediate transparency and financial impact.

Scale and Strengthen: Add rebate administration, compliance reporting and price transparency to increase stickiness and reduce regulatory risk.

Differentiate: Expand into employer reporting, specialty pharmacy integration and delegated entity support as IDN and payer strategies mature.

This modular path delivers quick wins today while supporting long-term growth.

Future-Ready Pharmacy Benefit Infrastructure

RxLogic continues to invest in capabilities aligned with where payer and IDN markets are heading, including enhanced rebate analytics, compliance dashboards, price transparency tools and expanded interoperability with pharmacy and clinical systems.

These investments position RxLogic not just as a claims engine but as a long-term partner in value-based care, delegated risk and integrated pharmacy management.

Smarter Control. Clearer Insight. Better Outcomes.

RxLogic gives payers and Integrated Delivery Networks the tools to manage pharmacy benefits with confidence, transparency and speed, without relying on opaque PBM models.
