

RxLogic Technology for PBM Reform: Infrastructure Built for Transparency, Accountability and Regulatory Confidence

Pharmacy Benefit Manager (PBM) reform is reshaping how pharmacy benefit operations must function. Federal transparency mandates and fiduciary oversight expectations, including new reporting and rebate pass-through provisions under the Consolidated Appropriations Act (CAA 2026), are shifting the industry toward greater operational accountability.

RxLogic was built for this moment. RxLogic's platform delivers modern SaaS-based technology solutions that enable pharmacy benefit organizations to operate with transparency, traceability and operational discipline. As regulatory expectations expand across the PBM ecosystem, RxLogic provides the infrastructure needed to demonstrate how claims are priced, how rebates are governed and how financial outcomes are produced. Built as a cloud-native, configurable platform, RxLogic embeds transparency directly within pharmacy benefit operations rather than layering reporting tools onto legacy systems.

Why wait? Most organizations try to build PBM reform programs internally, absorbing operational burden, manual reconciliation and audit prep. RxLogic eliminates that lift by embedding compliance, transparency and traceability directly into the workflow from day one.

Where Traditional Pharmacy Processes Fall Short

Regulators, plan sponsors and oversight agencies are no longer focused solely on outcomes. They increasingly require organizations to demonstrate how those outcomes are produced within their operational systems. This includes the ability to show how claims are priced, how rebates flow through contracts and how compensation structures impact pharmacy benefit spending.

Meeting this new standard requires more than policy updates or periodic reporting. It requires infrastructure capable of delivering transparency within the workflow itself – exactly what RxLogic's platform was built to accomplish.

Many PBM platforms were originally designed to process transactions, not to demonstrate how financial and clinical outcomes are produced.

Where Some Legacy PBM Systems Fall Short

Many PBM platforms were originally designed to process transactions, not to demonstrate how financial and clinical outcomes are produced. As regulatory expectations expand, these systems often create operational gaps that make transparency difficult to achieve.

Legacy platforms rely on downstream reporting overlays rather than embedded operational visibility.

- **Claim pricing logic** may be difficult to reconstruct or explain during audits.
- **Rebate eligibility and pass-through processes** are often managed outside the adjudication system.
- **Financial reconciliation** frequently requires manual analysis across multiple systems.
- **Periodic audits** replace continuous operational transparency.

These limitations make it difficult for organizations to demonstrate the level of accountability and traceability increasingly expected by regulators, plan sponsors and government programs.

What Sets RxLogic Apart

Transparency Built into the Claim Lifecycle: Pricing logic, rebate governance, financial reconciliation and compliance-aligned workflows are embedded directly within the adjudication process rather than layered through external reporting tools.

Rule-Driven, Reconstructable Claims Processing: Every claim outcome is governed by configurable system logic that can be traced and validated, enabling organizations to demonstrate exactly how pricing decisions were applied.

Structured Rebate Governance and Pass-Through Management: Rebate eligibility, contract alignment and pass-through structures are managed within the platform to support transparent financial outcomes.

Continuous Financial Traceability: Claims, payments and financial artifacts remain aligned within the system, supporting consistent reporting and simplified reconciliation.

Audit-Ready System Architecture: Operational data and workflows are designed to support regulatory review, enabling organizations to demonstrate compliance discipline in real time rather than reconstructing results after the fact.

Cloud-Native, API-First Infrastructure: Secure, scalable architecture integrates with TPAs, PBMs, health plans, pharmacies and financial systems without requiring disruptive platform replacement.

Value Across the Pharmacy Benefit Ecosystem

PBM and Benefit Administrators

- Demonstrate transparent claim pricing and rebate governance.
- Strengthen audit readiness as regulatory expectations expand.
- Improve operational efficiency through embedded financial traceability.

Health Plans and Self-Insured Plan Sponsors

- Gain clearer visibility into pricing methodologies and financial outcomes.
- Support fiduciary oversight requirements with consistent, verifiable data.
- Strengthen confidence in pharmacy benefit performance.

TPAs and Integrated Health Systems

- Operate pharmacy benefit programs with greater transparency and operational discipline.
- Support plan sponsor reporting requirements and regulatory oversight.
- Improve visibility across claims, financial workflows and benefit performance.

Preparing for the Next Chapter of PBM Reform

Regulatory reform signals a broader shift in how pharmacy benefit organizations will be evaluated. Transparency is increasingly expected to exist within operational systems rather than in periodic reports or post-hoc analyses. Organizations that treat transparency as infrastructure will be better positioned to meet these expectations. By embedding pricing logic, rebate governance and financial traceability directly within the claim lifecycle, RxLogic enables pharmacy benefit stakeholders to operate with the discipline and visibility required in an evolving regulatory environment.

PBM reform is not simply about disclosure. It represents a structural shift toward continuous accountability across pharmacy benefit operations. As the standard rises, infrastructure must rise with it.

The choice is clear: continue carrying the weight of legacy systems, or switch now to infrastructure purpose-built for PBM reform from day one. RxLogic does the heavy lifting so your teams don't have to, providing real-time transparency, operational accountability and regulatory confidence without delay.

RxLogic eliminates that lift by embedding compliance, transparency and traceability directly into the workflow from day one.

**Transparency Built In.
Accountability Demonstrated.
Infrastructure Ready for Reform.**
